Overview The AutoCAD program is used by engineers, architects, drafters, illustrators, and others. It is capable of designing and drawing everything from cars to buildings, airplanes, and bridges. It also integrates 3D modeling and animation. All AutoCAD functionality is managed via a tabbed interface with all tabs collapsed initially and shown in a tabbed panel as shown in the image below. The AutoCAD home screen. You can collapse and expand the tabs to fit your screen size and layout as seen in the image below. After collapsing and expanding the desired tabs, the AutoCAD tabs tab panel can be opened and closed at the same time. AutoCAD Layout The AutoCAD program uses an orthogonal drawing area with two axes, X and Y. When the program starts, there is a command line that can be used to draw a rectangle, square, circle, triangle, or arrow. If a command line is not active, the cursor is placed in the upper left corner of the drawing area. If no command line is active, the drawing area is initially filled with the command line's default color, typically black. The standard commands for drawing lines, arcs, and text are described below. The standard commands for drawing rectangles, circles, and polygons are described below. The AutoCAD "X" axis and the "Y" axis are perpendicular to each other. Command Line The AutoCAD command line or keyboard is used to make all commands. The default color of the line is black. The standard commands for drawing lines are described below. The default is one horizontal line.
