CD Scroll is a simple and easy to use program that can create you menus in no time. The software that was proposed is 100% safe, and you will not be bothered by any viruses or other malware.

Installing & Using CD Scroll

Installer 4 CD Scroll is a small, light application that is easy to use and functions perfectly.

Description: Comes in a lightweight package The application comes bundled with

---

several files you need to take care of in order for it to successfully deploy its features. The main window is only a skeleton for several commands you need to input in a configuration file. Don't be fooled, because commands are merely names of the files needed to display either a picture or launch a specific installer. Quick and easy creation process Your new menu is simple enough, with a side panel displaying available entries, while the rest of the space showing a screenshot, details, as

---

well as the “Install” button. Over two hundred entries can be created, each with its own screenshot and details. All effort in making this possible is editing a text file bundled with the downloaded package. You can also provide pictures of popular formats, but crop them before, because the application does not have any editing tools implemented. Good but far from being a pro Unfortunately, the application comes with a major drawback. You can only provide some specific types of EXE installers, otherwise the setup file does not run and triggers an error. This is a shame, since there are various setup types, each developer wanting to deliver a customized product. On the other hand, the

---

application gives you the possibility to create a menu in a jiffy. The included help manual is more than enough to get you up and running. What's more, you can apply this kind of menus even to removable storage devices, with no sophisticated commands that alter setup files. What do you think about this software?
