AutoCAD Crack Mac Architecture AutoCAD consists of a graphical user interface (GUI) and a programmable application program interface (API) that interact with the GUI. The GUI runs within a window and provides input/output (I/O) functions that interact with the API. The API is the software programming interface to the CAD software application. The API is composed of a number of programming interfaces. The programming interfaces available to the user are largely governed by the type of programming language with which the interface is created. AutoCAD may be used as a multi-user application. A single AutoCAD installation may support one or more users, and each user has their own files, menus, windows, and layers. As a multi-user application, AutoCAD can support a single transaction involving two or more users. Multi-user transactions typically involve a designer using an application on their workstation and a draftsman using an application on his workstation. AutoCAD provides standard functions that help support collaboration between users in a multi-user transaction. Multiple users can edit an open file simultaneously, regardless of the order in which they opened the file, and regardless of which user is drafting. The active user can make changes to the file and the other users can modify their work. New features include Auto Link, which allows the user to link an external file to an existing drawing, and M-Files, which allows the user to create files that can be opened by multiple users at once. The following table lists the key functions in AutoCAD. Key functions (All AutoCAD versions)

Views and selection toolbars The View toolbar is the toolbar along the top of the screen where the user can switch between views. The View toolbar has tools to select and edit a view. The view toolbars are located at the top of the drawing area and have tools to select and edit a view. Each view is a layer of the drawing. The tools on the view toolbars have corresponding tools on the View toolbar. View toolbars Tools for selecting and manipulating views The Select tool allows the user to select a view. The Select tool is normally on the View toolbar. The Select tool can be placed on the View toolbar as well. Tools for selecting and manipulating views View Commands The View Commands toolbar is the toolbar along the top of the screen where the user can switch between views. The View Commands toolbar has tools to select
