HyperMotion Technology allows you to increase player speed, weight and stamina, and it also makes you a more skilled dribbler. Players will be able to scale walls with their speed, as well as change direction on the fly, thanks to the assistance from skilled teammates. Throughout the game, you will use this technology to manipulate the ball and deliver perfectly placed crosses to your teammates. We've also added a new Goalkeeper system, which gives you more control over the goalkeeper. For example, the goalkeeper can dive to clear the ball and make a goal-saving tackle - and, even if he misses, the ball will still drop directly to the nearest teammate - or your team's closest attacker. As a defender, you can choose from a variety of static and dynamic reactions. In addition, you can now make heavy challenges on the opposition striker, creating more interest in a goal-scoring chance. Back to the Backboard A lot has changed since the 2011 release of FIFA 12. Now, you have more control over your team's motion, position and ball physics. Motion HyperMotion comes to life as you play. The system is completely based on the data collected during the gameplay of real players. This data includes the capture of the player's full body movements - so the player's position, speed, acceleration and momentum are computed. The player's physical abilities then control the on-screen behaviours of your players. What this means is that players will feel like they are actually responding to their real-life counterparts. As you try to maintain your balance or accelerate along the ground, or even scale walls, your players are going to react the same way. If you get the ball, then you can run, sprint or even jump, keeping momentum. If you lose the ball, it will return to you, keeping it tight to your body so that you can easily get it back. On the ball, the system will help you feel faster as the player who had possession is able to run around the player with the ball. If you lose the ball, the player with the ball will counterattack and launch attacks from distance. Even if your defender is still aware of his attacker, his control over the ball is kept. If you tackle the attacker, the ball will still return to you. Position A lot of the positions in soccer have changed. Gone
