title on thin aluminum on the outside, it's the standard aluminum construction that you are used to The rugged rubber tires would turn a fair amount of lights into nights, but you can also always use the front and rear lighting for the trail as well as the glowing dash. I particularly like the badge that lights up at night, reminding you there's a reason you are driving this car at night as well! We also get some interesting little details such as the Door handle pad on the inside of the door that also lights up at night. Of course, at night you would want to turn the fog lights on as well! Incase you forgot the fog lights are standard, another glowing sticker reminder of the feature as well. The Vertical Armor package is put together very well and it remains that way even through the rigorous environment as seen in this car. The factory reinforcement on the inside helps, ensuring good body work and the impact loads of a big impact or a low speed fall would be directed at impact points ensuring good form. What's new:

v7.6.18 Download Link Teaser As mentioned before in our last update this was a very short update and sorry about that. We are here today to give you more of an in-depth look at what is new about Edge of Storm v7.6.18. We will show you the unadulterated beast of a game that is Graviteam Tactics: Edge of Storm and give you a deeper dive on what is happening behind the scenes in the toolset and the game in general. So let's get started! Visual Updates First of all with this new version we have also changed the visual style and feel of the game to something we believe better matches modern trends and our vision of the game. We will explain why in more detail shortly. We also merged the original old tech (Thalmic palette) with the new one and most importantly fixed many bugs and performance problems related to the visual changes. We also made a handful of changes to the specs and I will name them all in this blog post. However, we will give you a quick overview of the most important ones here without going in-depth in this blogpost. First and foremost of all we now have 6 fps cap on shadows and 5 fps cap for reflections. We did this for the framerate stability and to create a more pleasing visual experience. In addition to that now we also have to extra aggressive FOV shaders and the environment-global shadow mapping FOV and reflectivity setting have been changed to 70, thus improving light mapping and shadowing even further. We also have a rather aggressive dynamic lighting which is something a lot of people have been asking for in the early days of the game. At the same time we have now reduced the overall color levels and feel of the lighting which feels more natural. At the end we have also increased all the shadow color to a much higher value to give a much more solid shadowing. Now let's talk about the other changes and how we optimized them. We have added 2x Support for AMD Vega based GPUs. We now have switched to XML for the new LOD merging system. Enlightment properties have been changed to color by level. We added GeoTrees for the editor and player. We brought in a new texture compression format to Edge of Storm to save lots of disk space and improve compression in general. General performance optimized. The

#3 of Phone Dating Sim's highly anticipated games: Dialtown is finally here! Many of you have been following our development for this game for the past four years, as we had to kind of rush and polish this game up before the actual phone dating sim market was ready for it. It is by far our biggest release to date, and we are so excited to finally share it with you! Dialtown is set in the small town of Beswitched, where everything is dominated by the magical, small telephone exchange called the Dials. The telephone exchange is actually a gateway into a fantasy world. The Dials hold the keys to unlocking the rest of the world, and you must overcome your fears and embark on a journey to find out what's inside! The game itself is a typical phone dating sim. Players start out at the beginning of the phone lines, as they set up their first number. Soon after you will be given a job, and with this job will come a new obstacle, which is part of the story! When starting the game you will be asked to name your character, and this name will be remembered throughout the entire game. While your dialogs influence your character, it doesn't change the name! You will use the phone lines to travel around in the fantasy world and discover new places in Beswitched. You will talk to other characters along the way and meet them! You can also call people at the Dials and talk to them through their lines. This will help you out and tell you more about the world. The game is fully voiced in English, and features around 300 different characters, which in turn all talk in hundreds of different languages! The game is played from a first-person point of view, but the story is told from the third-person like in most other games in the genre. The game features a fully voiced story with branching dialog options, a fully voiced, diary-like journal and a plethora of thousands of lines of text. Our goal with Dialtown was to provide the biggest and most diverse content for a phone dating sim, but also to go beyond this by providing what we believe is the most beautiful and immersive story we've ever been able to put into a game. *Gameplay is highly tailored to the game, with lots of custom dialogue, various actions, thousands of lines of text, and incredible custom sound design.* Some of the content in Dialtown was created to stretch the boundaries of the genre, and we hope it will
