The narration of Far From Noise deals with the brief moments of terror we experience when we are hit with the realization that we are losing something irreparable. The game's atmosphere is very similar to that of classical film noir. Our screenwriter has become very adept at placing us in a state of panic at the most inopportune moments. It is his task to make us better at dealing with this state of mind and to coax us out of our shame. But, it is his task as well to guide us through the game's haunting narrative. Far From Noise is a story about dealing with our own awareness of the inevitability of death. You play the role of our character, a single mother forced to take on the role of a single father. While you are meditating and pondering your own mortality, you are drawn into the world of a journalist and writer. You come to understand the complicated relationships between your life and her life, the death of her husband, and the corrosive effect that change has on the very realities of everyday life. Far From Noise challenges us to reconsider the reality of everyday life, our anxieties, and our attempts to make sense of it all.
